

PORTFOLIO OF EVIDENCE

AI, Growth Systems & Performance Marketing Leadership

A metrics-led portfolio for roles requiring marketing automation, acquisition strategy, CRM architecture, lead routing, reporting, and operational scale without unnecessary headcount.

10+	R2.4M+	12,000+
Years digital growth experience	Annual ad spend managed	Qualified contacts generated

Fouad Maasdorp

Lead Management Marketing Consultant - eSquared Consulting Pty Ltd

Executive Positioning

I build the operating layer between marketing, sales and delivery: acquisition funnels, automation workflows, CRM logic, reporting dashboards and lead-response systems. The work is not only campaign execution. It is the design of commercial infrastructure that improves speed, quality, attribution and accountability.

For an AI-first business, the practical advantage is simple: better systems create more revenue capacity before the company adds more people. This portfolio shows that capability across insurance, travel, technology, hospitality, consulting and business model development.

43%	4 hrs	92%	35%
CPL reduction	Follow-up time from 48 hrs	Attribution accuracy	Agent productivity uplift

Capability Map

Growth Area	Evidence
Acquisition	Google Ads, Meta Ads, CAPI, funnel architecture, creative testing and lead quality controls.
Automation	Lead scoring, routing, CRM workflows, WhatsApp logic, task creation and closed-loop feedback.
Revenue Operations	Dialler integration, sales handoffs, reporting layers and SLA-driven follow-up systems.
Strategic Positioning	Premium brand repositioning, service architecture, market validation and pricing logic.

1LIFE INSURANCE

Direct Response Optimisation

30%	31%	4.2:1
CPA decrease	Quote completion	ROAS

Context. Life insurance campaigns required stronger intent capture as CPA trended above target and low-quality traffic diluted sales capacity.

System intervention. Rebuilt campaign architecture into intent-based groups, added negative keyword governance, improved conversion tracking and automated spend controls for poor-performing keywords.

Commercial result. CPA reduced from R412 to R287 within 45 days, quote completion improved from 18% to 31%, and the structure became a reusable template.

TRAVELOPIA

Full-Funnel Meta Recovery

43%	12,000	8.4%
CPL reduction	New contacts	Consultation rate

Context. Post-pandemic acquisition needed rebuilding while iOS tracking loss weakened attribution and increased cost-per-lead.

System intervention. Implemented Meta CAPI, rebuilt TOFU/MOFU/BOFU funnel stages, used CRM audiences for exclusions and lookalikes, and fed lead quality signals back into optimisation.

Commercial result. CPL reduced from R156 to R89 over 90 days, first-party database grew by 12,000 contacts and booking consultations reached 8.4%.

LOBSTER TAVERN

Premium Digital Positioning

67%	9%	18%
Reservations	No-show rate	Revenue per cover

Context. A seafood restaurant needed stronger digital positioning, more direct reservations and consistent premium perception across public touchpoints.

System intervention. Rebuilt Google Business Profile logic, local SEO targeting, review response SOPs, Meta audience strategy and a reservation flow with automated reminders.

Commercial result. Online reservations increased 67%, no-shows dropped from 22% to 9%, and revenue per cover improved by 18%.

HUBSPOT CRM SYSTEMS

CRM Lead Management Architecture

24%	4 hrs	92%
Lead-to-opportunity	Follow-up SLA	Attribution accuracy

Context. Leads from forms, paid media and calls were leaking because sales and marketing worked from inconsistent data.

System intervention. Designed unified lead scoring, automated routing, sales task creation, campaign attribution and executive dashboards across CAC, velocity and pipeline.

Commercial result. Lead-to-opportunity conversion improved from 12% to 24%, follow-up time reduced from 48 hours to 4 hours and reporting became real time.

TARSUS TECHNOLOGY

Dialler Operations & CRM Integration

10 min	35%	29%
Response time	Productivity	Connection rate

Context. Marketing-generated B2B leads were manually transferred into outbound operations, causing delays, duplication and low agent productivity.

System intervention. Designed routing logic, webhook-based handoff architecture, lead prioritisation and agent feedback loops to improve targeting and operational reporting.

Commercial result. Lead response time fell from 24+ hours to under 10 minutes, agent productivity rose 35% and connection rate improved from 18% to 29%.

EVERGREEN WEALTH SOLUTIONS

Operational Workflow Optimisation

R200k	60	Systems
Monthly lead spend context	Employee ops context	Workflow redesign

Context. High lead volume, WhatsApp routing issues and unclear admin/sales handoffs created friction inside a call-centre environment.

System intervention. Mapped communication flows, redesigned routing logic, proposed CRM/SharePoint workflows and clarified sales, admin and collections operating responsibilities.

Commercial result. Produced a systems blueprint for faster response, fewer misroutes, clearer accountability and improved management visibility across the lead lifecycle.

Service Architecture & Positioning

R45k	85%	3 tiers
Avg project value	Retainer retention	Service model

Context. Consulting services needed clearer packaging to reduce scope creep and shift perception from execution vendor to strategic partner.

System intervention. Created diagnostic, implementation and advisory service tiers, proposal logic, ROI calculators and an acquisition diagnostic framework.

Commercial result. Average project value moved from R18,000 to R45,000 with stronger qualification and advisory-retainer positioning.

AI & Automation Capability

The strongest use of AI in commercial operations is not novelty content. It is decision acceleration: cleaner intake, faster routing, better qualification, automated follow-up, sharper reporting and fewer manual handoffs.

Relevant systems I can design or lead include AI-assisted lead qualification, WhatsApp intake flows, sales task automation, CRM hygiene workflows, lead scoring, campaign-to-revenue attribution, executive dashboards, knowledge-base documentation, and continuous improvement loops.

Lead Gen	Speed	Quality
Acquisition + conversion systems	Routing + follow-up SLAs	Scoring + feedback loops

Operating Model

1. Diagnose the leakage points. 2. Map the workflow from lead source to sale. 3. Automate the repetitive handoffs. 4. Create reporting that exposes bottlenecks. 5. Improve weekly using conversion, speed and quality data.

Credentials & Technical Stack

Platforms include Google Ads, Meta Business Suite, LinkedIn Ads, GA4, Looker Studio, HubSpot CRM, Microsoft 365, SharePoint, WordPress, Elementor, Vercel, GitHub, WhatsApp workflow planning and dialler operations exposure.

Certifications and development areas include Google Ads, GA4, Meta digital marketing, HubSpot CRM implementation, Six Sigma process-improvement concepts and POPIA-aware data handling.

Professional timeline: eSquared Consulting Pty Ltd, Travelopia, Lobster Tavern, Tarsus Technology and Telesure Investment Holdings / 1Life Insurance.
